

OVERFLOW PROTECTION FOR A COMMODE

Abstract of the Disclosure

[00021] A commode having overflow protection. An overflow drain arrangement is provided approximate the collection basin for the commode, with the overflow drain arrangement having a collection cavity for collecting a significant amount of overflow. An overflow trap extends from the collection cavity, providing an overflow outlet from the commode separate from the outlet from the collection basin. A plurality of overflow apertures lead from the collection basin to the collection cavity.
